

GENERATORS

Prevent needless motor wear and reduce fuel costs attributed to truck engine idling.

The APU-B by ESI is a 6 kilowatt portable diesel generator set with a heat exchanger system. The heat exchanger system transfers heat through coolant to another circuit such as a truck engine. The secondary coolant circuit has integrated quick disconnects and a circulation pump to maintain coolant flow. In addition to providing heat, the unit also provides AC power for auxiliary use.

Specifications

Generator

Engine	Kubota Z482
Generator	Mecc Alte
Engine continuous power	6kW
Voltage	120/240V
Auxiliary power	6kW @ 60Hz

Heat output

Max from coolant	37,000 BTU/hr
Electric heat power	6kW

Fuel

Type	ULSD
Storage	External tank
Usage	0.78 gph @ full load (6kW) 0.44 gph @ no load
Secondary containment	13 gal

Weight

507 lbs
